

Standard + Augmented leads.

Augmented means amplified 50%.

a = augmented
V = voltage

R = Right
L = Left
F = foot

Lead I - Lateral
Lead II - Inferior
Lead III - Inferior

aVR =
Right Shoulder view
mainly Base, atria, vesicles
QRS = normally negative.

aVL =
Left Shoulder view
Lateral view of Left ventricle.
QRS = neither (+) or (-)

aVF =
Regular view is left ventricle
Inferiorly from ~~the~~ left leg.
QRS = positive.

"Einthoven Triangle"

Right Axis Deviation

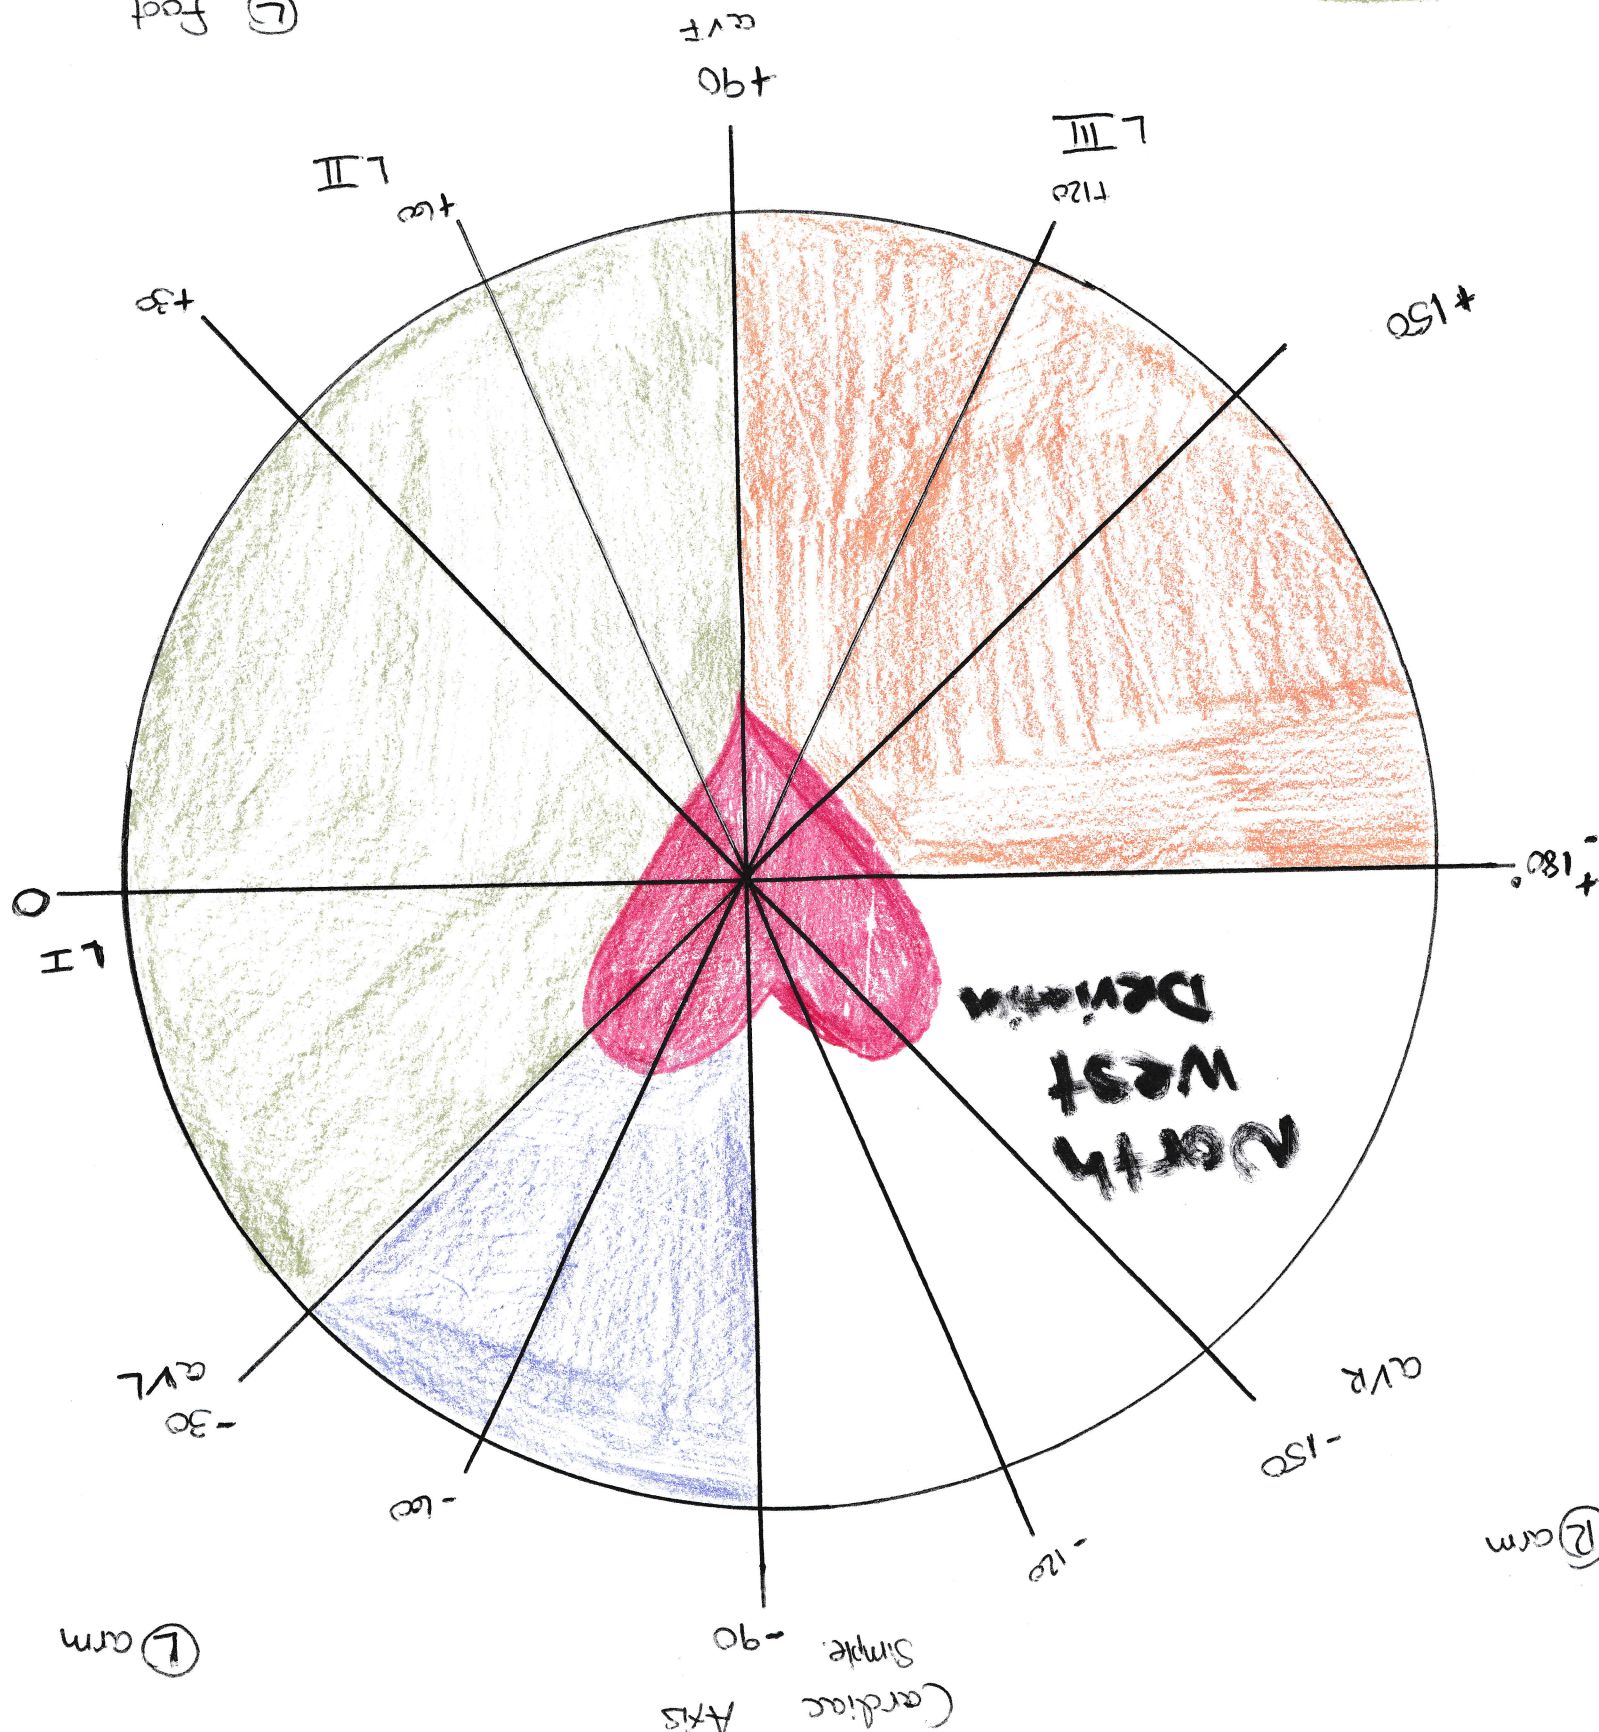

Left Axis Deviation

Normal Axis

"Circle of Orientation"
Justin 2012

Ⓞ Foot

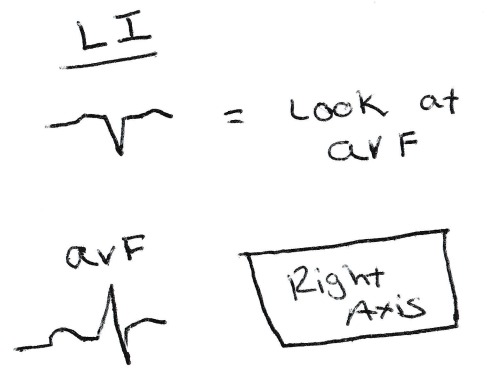

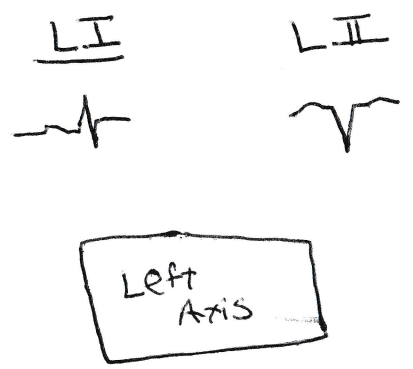

Put it together.

A Depolarized wave toward a \oplus electrode will be \oplus on EKG.
 \ominus electrode will be \ominus on EKG.

Normal

- LI = Positive Deflection
- LII = Positive Deflection
- LIII = Positive Deflection
- avR = negative Deflection
- avL = negative Deflection
- avF = positive Deflection

"If"
Vectors tell us our Deviations!

* Deviations can help us to determine blocks of the Bundle of His, Bundle Branches, or the Purkinje fibers.
