

Convert the temperatures from Celsius to Fahrenheit.

Ex) $25^{\circ}\text{C} = \underline{77^{\circ}}\text{F}$

1) Multiply the temperature times 9.

$$25^{\circ} \times 9 = 225^{\circ}$$

2) Divide the temperature by 5.

$$225^{\circ} \div 5 = 45^{\circ}$$

3) Add 32.

$$45^{\circ} + 32 = 77^{\circ}$$
