POINTS	DESCRIPTION
4	<p><b>PART A:</b> (2 points) Bert's: <math>y = 1 + 3x</math> Madeline's: <math>y = 3 + 2x</math></p> <p><b>PART B:</b> Two Miles (both cost \$7) (Note only need the answer of two miles for full points)</p> <p><b>PART C:</b> Jackson should call Madeline because it will cost him \$24 where Bert will cost him \$32.5</p>
3	Student will receive 3 points if they get any 3 of the four parts listed above (note that part A counts for 2 points). If part C does not include a comparison of the two different prices then it does not receive points.
2	Student will receive 2 points if they get any 2 of the four parts listed above (note that part A counts for 2 points). If part C does not include a comparison of the two different prices then it does not receive points.
1	Student will receive 1 point if they get any 1 of the four parts listed above (note that part A counts for 2 points). If part C does not include a comparison of the two different prices then it does not receive points.

**Algebra 1  
Constructed Response**

Katie decided that she wants to build a sandbox for her son to play in. In order to look nice in her backyard she knows that she wants the length of the sandbox to be 4 feet longer than its width.

**PART A:** Write an expression that expresses the perimeter of the sandbox in terms of  $x$ .

---

**PART B:** Katie will need to put down a tarp before filling the sandbox with sand. Write an expression that will show the total square footage of tarp she will need for her sandbox in terms of  $x$  feet.

---

**PART C:** Assuming that Katie wants the width of the sandbox to be 6 feet, how much square footage of tarp will she need?

---

**PART D:** Katie plans on making the sandbox 2 feet deep. Assuming the width of the sandbox is 6 feet, how much cubic feet of sand will she need to buy?

---

**PART E:** Katie went to the home improvement store and noted the following prices  
Wood (for the perimeter of the sandbox): \$0.50 per foot  
Tarp: \$0.75 per Square foot  
Sand: \$1.25 per cubic foot.

Assuming that the width of the sandbox is still 6 feet, how much will it cost for the full construction of the sandbox?
