Let f be a function defined on the closed interval $-5 \leq x \leq 5$ with $f(1) = 3$. The graph of f' , the derivative of f , consists of two semicircles and two line segments, as shown above.

- For $-5 < x < 5$, find all values of x at which f has a relative maximum. Justify your answer.
- For $-5 < x < 5$, find all values of x at which f has a point of inflection. Justify your answer.
- Find all intervals on which the graph of f (not shown) is concave up. Justify your answer.
- Find all intervals on which the graph of f (not shown) has a positive slope. Justify your answer.

Free Response Question:

- a) f has a relative maximum at $x = -3$ and $x = 4$ because $f'(x)$ changes signs from positive to negative.
- b) f has a point of inflection at $x = -1$ and $x = 2$ because f'' changes signs
- c) f is concave up on $(-5, -4)$ and $(-1, 2)$ because f' is increasing or $f'' > 0$
- d) f has a positive slope on $(-5, -3)$ and $(1, 4)$ because $f' > 0$.
